

Atlanta, GA

Education

DigitalCrafts 16 Week Immersive Bootcamp, Feb. 2016 – June 2016 (expected)

16 Week Immersive Bootcamp

- Perfected my front-end development abilities through building web applications using HTML, CSS, JavaScript, and various JavaScript libraries and frameworks.
- Learned back-end development while building full-stack web applications using the MEAN & the LAMP stack.

Bachelor of Fine Arts, Concentration in Game Art & Design, 2011

The Art Institute of Washington, Arlington, VA

Certifications

CompTIA A+ Certified August 2015 – 2018

License number: COMP001020606673

Professional Experience

DigitalCrafts, Atlanta GA

DigitalCrafts Web Developer 02/2016 – Present

- Developer in 16-week full stack immersive bootcamp with a heavy emphasis placed on learning native JavaScript as well as JavaScript frameworks including AngularJS.
- Daily project work includes a variety of lessons emphasizing powerful, efficient code while at the same time showing an appreciation for aesthetic design.
- Learning to leverage the power of the online developer community to overcome coding challenges and to independently grow as a developer.

Recent Projects (2016)

Ticket Fix Me - [Live Demo](#) • [Github](#) Ticketing system for Tenants to create and track tickets they submit for maintenance. Help property owners manage their properties. Contractors can bid for tickets that property managers display in their service region. Site built using the MEAN Stack with MySQL as the database. Integrated custom API built in Express.js to handle GET and POST requests sent from custom frontend built with Angular.js.

Digital Roast - [Live Demo](#) • [Github](#) Ecommerce site built using the MEAN Stack. Login, registration, & payment functionality using Stripe and passport authentication. Integrated custom API built in Express.js to handle GET and POST requests sent from custom frontend built with Angular.js

My Grub - [Live Demo](#) • [Github](#) Created an app providing recipe recommendations based on the inventory items a user chooses to include in their search. The app is built using the Yummly API, AngularJS, JavaScript, jQuery, Bootstrap, and the Addthis social media plug-in. LocalStorage and Angular factories were also used to simulate back-end services and share information between controllers ultimately allowing the app to use log-ins and store user inventory/favorite foods. App also includes an entertaining wait page while loading.

Black Jack - [Live Demo](#) • [Github](#) Blackjack game built with a little twist. The site is built using JavaScript, jQuery, Bootstrap, HTML, CSS, and Compass/SaSS. The game engine is built in native JavaScript and site layout out is responsive across all mobile devices.
